

Health Care Quality: How Does Your State Compare?

AHRQ's 2016 State Snapshots used more than 250 statistical measures to provide state-by-state summaries of health care quality. Examples in this illustration show top-scoring states in 2014 in three areas – avoiding sepsis in surgery patients, ensuring specialty care for kidney failure patients, and providing children with recommended vaccinations. Access the online State Snapshots for quality information on all 50 States and the District of Columbia.
